COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

STOCKS OF BARLEY AND RYE ON FARMS
CROP YEARS 1939 - 1948

Estimates of farm stocks of barley and rye, conforming with the quarterly pattern of similar estimates for other commodities, are here presented for producing States and the United States. The tables which follow include all such estimates currently available.

Prior to this publication, estimates of farm stocks of barley and rye, by States, have been prepared as of the following dates: October 1, beginning in 1944; December 1, beginning in 1939; April 1, beginning in 1944; and June 1, beginning in 1934. To conform with the quarterly pattern for other commodities two new series of State estimates, beginning in 1940, are being instituted -- as of January 1, based upon the former December 1 series, and as of July 1, based upon the June 1 series. In the process of interpolation employed in shifting to the new dates, such data as monthly sales, estimated quantities fed on farms, market receipts, distribution and use after moving from farms, and chart relationships with estimates for other periodic dates were all considered. Similar methods will be followed in carrying the series forward, as the basic data reported by farmers will be obtained, as in the past, on the December and June General Schedules. (Continued on page 10).

Previously, barley and rye stocks estimates as of January 1 and July 1 have been published for the United States only. Currently, estimates for October 1 from 1939 to 1943, and for April 1, from 1940 to 1943, have been prepared for the United States only. In order to present the complete quarterly series now available, the estimates for October 1 and April 1, including State data on those dates since 1944, are also shown in the preceding tables.

Upon publication of these new historical series, publication of December 1 and June 1 estimates of farm stocks of barley and rye is being discontinued. Instead, the new series for January 1 and July 1 are to be published currently, for the producing States and the United States, in the monthly Crop Production reports.
